Education

Bachelor's Degree in Computer Science - 2021

Personal projects

Near You – Local Services Marketplace Platform
GitHub:
https://github.com/gabrielgiroe1/near_you

- Designed and built a full-stack platform connecting users with local service providers
- Implemented provider features: service listings, availability scheduling, pricing, and reviews
- Built user features: booking system, notifications, and Google Maps integration
- Integrated Stripe for payments and Active Storage with AWS S3 for media handling
- AI-assisted service request flow. Integrated an LLM API into a Ruby on Rails marketplace to extract service category, location, urgency, and scheduling preferences from natural-language requests. Validated AI output and matched requests against provider availability stored in the application.

Tech Stack: Ruby on Rails, PostgreSQL, Hotwire, Tailwind CSS, AWS S3, Stripe

Technical Skills

Ruby on Rails, PostgreSQL, Redis, Sentry, Sidekiq, Hotwire, Turbo, Stimulus, Tailwind CSS, RSpec, Minitest, Claude Code

PROFILE

Software Engineer with 3+ years of experience building SaaS products, marketplaces, CRMs, and internal platforms for international startups. Experienced in end-to-end feature delivery with Ruby on Rails, PostgreSQL, Hotwire, and AWS. Uses AI-assisted development tools, including Claude Code and similar tools, to accelerate implementation, research solutions, and improve development workflows.

WORK EXPERIENCE

Make Software SRL
Ruby on Rails Software Engineer
March 2023 - Present

Software development company providing Ruby on Rails consulting and product development services for startups and technology companies in the U.S. and internationally.

Selected Client Engagement:

Confidential Cybersecurity SaaS Company — OCTOBER 2025 – PRESENT

- Owned the end-to-end development of multiple customer-facing and internal applications, including a cybersecurity platform, CRM, and operational tools.
- Built and launched a B2B Managed Detection & Response (MDR) platform with secure authentication, payment processing, and role-based access control.
- Designed a multi-tenant architecture with secure API authentication, token lifecycle management, and audit logging.
- Developed a custom CRM that streamlined lead management, customer workflows, and internal operations.
- Integrated Trust Payments with webhook-based payment validation and reconciliation.
- Partnered closely with company leadership to translate complex cybersecurity workflows into scalable, maintainable Ruby on Rails applications.

Tech Stack: Ruby on Rails, Hotwire (Turbo/Stimulus), PostgreSQL, Tailwind CSS, Devise, OmniAuth

The Tone (Remote, U.S. Client via Contractor Agreement) — April 2025 – July 2025

- Served as the primary Ruby on Rails engineer, delivering 50+ production-ready pull requests across a real-time trade and marketplace platform.
- Built a complete trade engine with Hotwire, Turbo, and AASM.
- Implemented QR-based trade check-in, marketplace search, notifications, and payment workflows.
- Collaborated directly with U.S. stakeholders from design through production.

Tech Stack: Ruby on Rails, Hotwire (Turbo + StimulusJS), PostgreSQL, Tailwind CSS

ReelOn Technologies (Remote) — February 2025 – April 2025

- Developed core features for a large-scale social platform, owning end-to-end implementation across content creation, media management, and user interactions.
- Built a flexible @mention system supporting 6+ entity types using polymorphic associations, Stimulus, and autocomplete.
- Designed a scalable post creation framework supporting multiple content types, including audio, video, documents, jobs, events, polls, and celebrations.
- Implemented advanced social features including hashtag extraction, location tagging, scheduled publishing, and rich media previews.
- Investigated and resolved production issues reported through Sentry, improving application stability and ensuring a reliable user experience.
- Optimized nested comment tracking and media handling to improve scalability and application performance.
- Collaborated with QA, product managers, and developers to deliver production-ready features, while mentoring junior engineers.

Tech Stack: Ruby on Rails, Hotwire (Turbo + StimulusJS), Tailwind CSS, PostgreSQL

Soft Skills

Cross-functional communication, Experience working in distributed international teams, Problem solving mindset

Management

Self-Management, Agile, Scrum, Task and Time-tracking

Languages

English
Romanian

Dependev (Remote) January 2024 – June 2024

- Enhanced admin panel functionality using Avo to improve usability for 250+ customers
- Built advanced dashboard filters, improved search capabilities, and optimized authorization flows
- Delivered new features and resolved production issues across multiple client projects

Tech Stack: Ruby on Rails, Hotwire, Avo gem

Duty Labs (Remote) March 2023 - June 2023

- Developed a booking platform with time zone conversion and content moderation features
- Implemented a notification system to improve user engagement and system feedback
- Contributed to backend architecture and feature delivery in a production environment

Tech Stack: Ruby on Rails, Sidekiq, Pundit, ActiveAdmin, Redis

Ruby on Rails intern July 2021 - September 2021

Agile Freaks - internship

- Contributed to a Rails codebase within an Agile team environment
- Gained experience with Git workflows, code reviews, and test-driven development
- Wrote unit and integration tests using RSpec

Technologies: Ruby on Rails, Git, RSpec, Agile/Scrum
