Education

Bachelor's Degree in Computer Science - 2021

Personal projects

Near You - Local Services Marketplace Platform
GitHub:

https://github.com/gabrielgiroe1/near_you

- Designed and built a full-stack platform connecting users with local service providers
- Implemented provider features: service listings, availability scheduling, pricing, and reviews
- Built user features: booking system, notifications, and Google Maps integration
- Integrated Stripe for payments and Active Storage with AWS S3 for media handling

Tech Stack: Ruby on Rails, PostgreSQL, Hotwire, Tailwind CSS, AWS S3, Stripe

Technical Skills

Ruby on Rails, PostgreSQL, Redis,
Sentry, Sidekiq, Hotwire, Turbo,
Stimulus, Tailwind CSS, RSpec,
Minitest

Soft Skills

Cross-functional communication,
Experience working in distributed
international teams, Problem
solving mindset

PROFILE

Full-Stack Ruby on Rails Developer specializing in building scalable SaaS platforms, internal tools, and real-time applications. Experienced in owning end-to-end feature delivery, from architecture and database design to deployment and iteration. Strong focus on performance, maintainability, and translating complex business requirements into reliable software solutions. Comfortable working in distributed international teams and collaborating directly with product stakeholders.

WORK EXPERIENCE

Full-Stack Developer (Contractor)

OCTOBER 2025 - PRESENT

Confidential Cybersecurity SaaS Company

- Designed and developed multiple internal and external systems, including a public platform, internal CRM, and supporting tools
- Built and launched a B2B Managed Detection & Response (MDR) platform with structured technical content and conversion-focused flows
- Developed a custom CRM system that streamlined lead management, client workflows, and operational processes
- Integrated secure payment processing (Trust Payments) with webhook-based validation and reconciliation flows
- Implemented multi-tenant architectures with role-based access control and environment isolation
- Designed secure API authentication systems (hashed tokens, expiration, revocation) with audit logging
- Built internal tools that improved operational efficiency and reduced manual workflows
- Translated complex cybersecurity concepts (SIEM, EDR/XDR, incident response) into scalable application logic and UI
- Worked closely with leadership to align technical delivery with business and product goals

Tech Stack: Ruby on Rails, Hotwire (Turbo/Stimulus), PostgreSQL, Tailwind CSS, Devise, OmniAuth

Main Full-Stack Ruby on Rails Developer (Contractor)

April 2025 - July 2025

The Tone (Remote, U.S. Client via Contractor Agreement)

- Delivered 50+ production-ready pull requests as the main developer for a real-time trade and marketplace platform
- Designed and implemented a full trade proposal engine with multi-step Turbo workflows, real-time previews, and role-based product grouping
- Built a QR code-based drop-off check-in system with secure validation flows for trade participants
- Developed a state machine-driven product lifecycle using AASM to enforce availability, locking, and expiration rules
- Created a scalable marketplace with live search, advanced filtering, and responsive UI using Tailwind CSS and DaisyUI
- Integrated notification systems (email + in-app) for all critical trade events using Noticed and Postmark
- Refactored core business logic into service objects and model validations to improve maintainability and testability
- Collaborated directly with product stakeholders and delivered end-to-end features from concept to production

Tech Stack: Ruby on Rails, Hotwire (Turbo + StimulusJS), PostgreSQL, Tailwind CSS

Management

Self-Management, Agile, Scrum,
Task and Time-tracking

Languages

English
Romanian

Ruby Full Stack Developer (Contractor)

February 2025 - April 2025

ReelOn Technologies (Remote)

- Built a flexible @mention system supporting 6+ entity types using polymorphic associations and Stimulus-based autocomplete
- Developed multiple post types (audio, video, document, event, job, poll, celebration) with dynamic rendering
- Implemented features such as hashtag extraction, location tagging, previews, and scheduled publishing
- Built scalable media handling for images, video, audio, and documents with preview support
- Delivered a full post-scheduling system with validation and automatic publishing logic
- Implemented efficient nested comment tracking using counter caches and custom aggregation methods
- Mentored junior developers and collaborated with QA and product teams to deliver production-ready features

Tech Stack: Ruby on Rails, Hotwire (Turbo + StimulusJS), Tailwind CSS, PostgreSQL

Ruby Full Stack Developer(Contractor)

January 2024 - June 2024

Dependev (Remote)

- Enhanced admin panel functionality using Avo to improve usability for 250+ customers
- Built advanced dashboard filters, improved search capabilities, and optimized authorization flows
- Delivered new features and resolved production issues across multiple client projects

Tech Stack: Ruby on Rails, Hotwire, Avo gem

Ruby Full Stack Developer (Contractor)

March 2023 - June 2023

Duty Labs (Remote)

- Developed a booking platform with time zone conversion and content moderation features
- Implemented a notification system to improve user engagement and system feedback
- Contributed to backend architecture and feature delivery in a production environment

Tech Stack: Ruby on Rails, Sidekiq, Pundit, ActiveAdmin, Redis

Ruby on Rails intern

July 2021 - September 2021

Agile Freaks - internship

- Contributed to a Rails codebase within an Agile team environment
- Gained experience with Git workflows, code reviews, and test-driven development
- Wrote unit and integration tests using RSpec

Technologies: Ruby on Rails, Git, RSpec, Agile/Scrum
