Education

Lucian Blaga University, Romania
Bachelor's Degree in Computer Science - 2021

Personal projects

Near You - Full Stack Web Application for Local Service Booking Conceptualized, designed, and built a web app that connects users with local service providers.

For Providers: Service category selection, location-based services, hourly rate management, reviews, availability scheduling, and Stripe payments.

For Users: Appointment booking, Google Maps integration, notifications via noticed gem and mail, and profile management.

Tech Stack: Ruby on Rails, Tailwind CSS, PostgreSQL, Hotwire, Active Storage with AWS S3.

Skills

Ruby on Rails, PostgreSQL, Redis,
Sentry, Sidekiq, Hotwire, Turbo,
Stimulus, Tailwind CSS, RSpec,
Minitest

Languages

English
Romanian

PROFILE

Full-Stack Ruby on Rails Developer with a strong track record of building real-time, scalable applications using Hotwire (Turbo + Stimulus), ViewComponent, and modern Rails practices. Known for rapid delivery, clean architecture, and solving complex problems.

WORK EXPERIENCE

Ruby Full Stack Developer (Freelancer)

NOVEMBER 2025 - PRESENT

Built and contributed to multiple Ruby on Rails projects, implementing secure multi-tenant architectures with environment isolation, role-based access (admin/user), and subdomain-isolated admin panels (Rails Engines). Designed secure API key authentication (hashed tokens, revocation, expiration) with audit logging. Integrated Trust Payments with webhook-based transaction confirmation and implemented Google OAuth 2.0.

Tech Stack: Ruby on Rails, Devise, OmniAuth, PostgreSQL, Tailwind CSS

Main Full-Stack Ruby on Rails Developer (Contractor)

The Tone (Remote, U.S. Client via Contractor Agreement)

April 2025 - July 2025

Delivered 50+ production pull requests as the main developer for a real-time trade and marketplace platform.

Designed and implemented a full trade proposal engine, including product selection, multi-step Turbo workflows, real-time item previews, role-based product grouping, and store selection.

Developed QR code-based drop-off check-in system for trade participants, integrating unique code generation and scan-based role validation.

Built a state machine-driven product lifecycle with custom AASM transitions and validations to enforce availability, locking, and expiration rules.

Created a scalable marketplace with live search suggestions, multi-faceted filters, paginated results, and fully responsive design using Tailwind CSS and DaisyUI.

Integrated Noticed and Postmark to deliver email and in-app notifications for all critical trade events: accepted, declined, dropped off, or expired.

Refactored major logic from controllers to service objects and model-level validations to improve testability and maintainability.

Scoped and built store dashboards, grouped trade views, and Devise-based authentication for store users.

Collaborated closely with a U.S.-based product team via GitHub and Slack.

Tech Stack: Ruby on Rails, Hotwire (Turbo + StimulusJS), PostgreSQL, Tailwind CSS

Ruby Full Stack Developer (Contractor)

ReelOn Technologies (Remote)

February 2025 - April 2025

Built a flexible @mention system supporting 6+ entity types using polymorphic associations, regex parsing, and Stimulus-powered autocomplete.

Developed a diverse set of post types including audio, video, document, event-based, job-based, poll-based, and celebration posts.

Implemented post features like location tagging, hashtag extraction, preview rendering, and scheduled publishing with Turbo Streams.

Built a robust media handling system for uploading and previewing images, videos, audio files, and documents with iframe rendering.

Delivered the Post Scheduling feature with date/time selector, validation logic, and auto-publish functionality.

Implemented scalable nested comment tracking using Rails counter cache and a custom total count method on the Post model.

Mentored junior developers and collaborated closely with QA and product teams to ship high-quality releases.

Tech Stack: Ruby on Rails, Hotwire (Turbo + StimulusJS), Tailwind CSS, PostgreSQL

Ruby Full Stack Developer(Contractor)

Dependev (Remote)

January 2024 - June 2024

Avo Gem Development Enhanced the Avo admin panel to improve usability and efficiency for 250+ customers.

Feature Development Built advanced dashboard filters, improved search and authorization infrastructure.

Technical Support Provided customer support, troubleshooting, and bug fixes.

Tech Stack: Ruby on Rails, Hotwire, Avo gem

Ruby Full Stack Developer (Contractor)

Duty Labs (Remote)

March 2023 - June 2023

Booking Platform Developed a dynamic booking system with time zone conversion and content moderation.

Implemented a robust notification system for user engagement.

Tech Stack: Ruby on Rails, Sidekiq, Pundit, ActiveAdmin, Redis

Ruby on Rails intern

Agile Freaks - internship

July 2021 - September 2021

Contributed to a Ruby on Rails codebase within an Agile team environment. Gained hands-on experience with Git-based workflows, code reviews, and test-driven development, including unit and integration testing.

Technologies: Ruby on Rails, Git, RSpec, Agile/Scrum
